FMCG Sales, Marketing & Profitability Analysis

Insights from three interactive dashboards covering
orders placed between 2023 and 2025

\$17.08M

Gross Sales

\$14.45M

Net Revenue

\$3.31M

Total Profit

18,240

Orders

Prepared by Archana Gautam

Data Science & Analytics • Power BI, DAX

Data and Approach

The data comes from one CSV file called *fmcg_sales_marketing_profitability_2023_2025*. It was loaded into Power BI using Power Query, and a data type was set for all 27 columns. The table has no missing values and every Order_ID is different, so each row is one order. DAX measures were then added and the report was made on three pages (dashboards).

Period	1 January 2023 to 31 December 2025 (three full years)
Size	18,240 orders, 27 columns, no missing values
Places	5 regions, 17 countries, 48 cities
Products	5 product categories, 17 brands, 30 products
Selling	4 sales channels (Wholesale, Distributor, Modern Trade, Online), 2 customer types (B2B, B2C), 7 promotion types, 36 sales people
Money columns	Unit price, discount %, gross sales, marketing spend, COGS, logistics cost, net revenue, profit and profit margin %

A part of the data as seen in Power BI

The report has three dashboards

Dashboard 1 - Sales Performance Overview: main numbers, sales trend, product profit, city sales and what affects gross sales.

Dashboard 2 - Channel, Brand and Product Performance: units, revenue share, top brands, profit margin and revenue by region.

Dashboard 3 - Marketing, Logistics and Profit Drivers: marketing return, logistics cost, units sold and what makes up the profit.

Objectives of the Analysis

The analysis has three objectives. Each one is answered by one dashboard, and the charts follow the same order.

Objective 1: Measure overall sales performance and growth

Find out how big the business is, how average sales changed from quarter to quarter, which cities and product categories sell the most, and what makes a sale bigger or smaller. This is answered by Dashboard 1.

Objective 2: Find the strongest channels, brands and product categories

Compare the four sales channels, the brands and the five product categories on units, revenue share, net revenue and profit margin, and see how revenue is spread across regions. This is answered by Dashboard 2.

Objective 3: Check cost efficiency and what drives profit

See if marketing money is well spent, find the cities where logistics cost is high, look at units sold by product, and break the profit down by channel, discount and logistics cost. This is answered by Dashboard 3.

DAX Formulas Used

Eight DAX measures were created on the main data table. The formulas are shown as they were written in Power BI. The measures that divide use DIVIDE() with 0 as the alternate result, so there is no error when the bottom number is zero.

Measure 1: Total Gross Sales

```
Total Gross Sales =  
SUM('fmcg_sales_marketing_profitability_2023_2025'[Gross_Sales_USD])
```

Adds up gross sales (units x unit price, before discount). Used in the Total Gross Sales card on Dashboard 1.

Measure 2: Total Net Revenue

```
Total Net Revenue =  
SUM('fmcg_sales_marketing_profitability_2023_2025'[Net_Revenue_USD])
```

Adds up the revenue after discount. It is used in Average Order Value, Revenue Share % and Logistics Cost %.

Measure 3: Total Profit

```
Total Profit =  
SUM('fmcg_sales_marketing_profitability_2023_2025'[Profit_USD])
```

Adds up profit (net revenue minus COGS, logistics and marketing). Used in the profit card, the profit line, the decomposition tree and Marketing ROI.

Measure 4: Total units sold

```
Total units sold =  
SUM('fmcg_sales_marketing_profitability_2023_2025'[Units_Sold])
```

Adds up the units sold.

Measure 5: Average Order Value

```
Average Order Value =  
DIVIDE(  
    [Total Net Revenue],  
    DISTINCTCOUNT('fmcg_sales_marketing_profitability_2023_2025'[Order_ID]),  
    0  
)
```

Net revenue divided by the number of orders. It shows how much revenue one order brings. Used in the card on Dashboard 1.

Measure 6: Revenue Share %

```
Revenue Share % =  
DIVIDE(  
    [Total Net Revenue],  
    CALCULATE(  
        [Total Net Revenue],  
        ALL('fmcg_sales_marketing_profitability_2023_2025'[Sales_Channel])  
    ),  
    0  
)
```

Net revenue of each channel divided by the net revenue of all channels. ALL() removes the channel filter so the total is always 100%. Used in the revenue share table on Dashboard 2.

Measure 7: Marketing ROI

```
Marketing ROI =  
DIVIDE(  
    [Total Profit],  
    SUM('fmcg_sales_marketing_profitability_2023_2025'[Marketing_Spend_USD]),  
    0  
)
```

Profit earned for every \$1 of marketing spend. Used in the marketing chart on Dashboard 3.

Measure 8: Logistics Cost %

```
Logistics Cost % =  
DIVIDE(  
    SUM('fmcg_sales_marketing_profitability_2023_2025'[Logistics_Cost_USD]),  
    [Total Net Revenue],  
    0  
)
```

Logistics cost as a share of net revenue. A lower value is better. Used in the logistics chart on Dashboard 3.

Calculations used directly in the visuals

Some visuals use the Sum or Average option of Power BI on a column instead of a named measure. Fact means the table fmcg_sales_marketing_profitability_2023_2025.

Visual	Calculation
Net Revenue card	SUM(Fact[Net_Revenue_USD])
Units Sold card	SUM(Fact[Units_Sold])
Average Sales Per Year	AVERAGE(Fact[Gross_Sales_USD])
Gross Sales in Each City	SUM(Fact[Gross_Sales_USD])
Net Revenue and Profit (columns)	AVERAGE(Fact[Net_Revenue_USD])
Average Units Sold by Channel	AVERAGE(Fact[Units_Sold])
Profit Margin by Category	AVERAGE(Fact[Profit_Margin_Pct])
Top 10 Brands	AVERAGE(Fact[Net_Revenue_USD])
Net Revenue by Region	SUM(Fact[Net_Revenue_USD])
Units Sold by Product	SUM(Fact[Units_Sold])
Marketing Spend (columns)	SUM(Fact[Marketing_Spend_USD])

Top N filters. Four visuals show only the leading items: the city pie chart (top 10 cities by gross sales), the brand funnel (top 10 brands by average net revenue), the region chart (top 15 cities by gross sales) and the logistics chart (top 10 cities by Logistics Cost %).

Date tables. Power BI also made hidden date tables from Order_Date on its own. These were not written by hand.

Dashboard 1: Sales Performance Overview

Objective 1: Measure overall sales performance and growth.

The first page gives the big picture. The five cards on the left show the main numbers. Next to them are the average sales per year, the net revenue and profit by product category, the key influencers of gross sales and the gross sales of the top ten cities. A Year slicer on the bottom left filters the whole page. All numbers in this report are with all years selected.

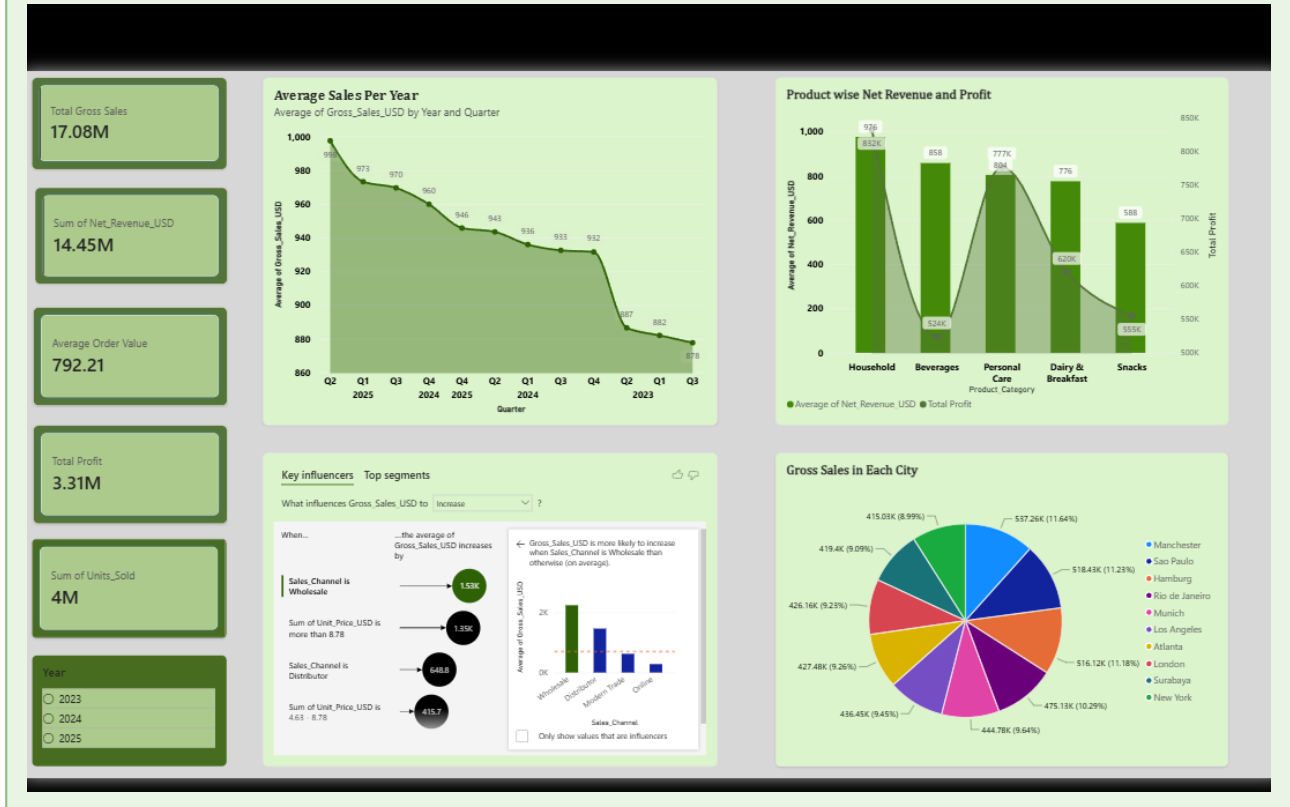

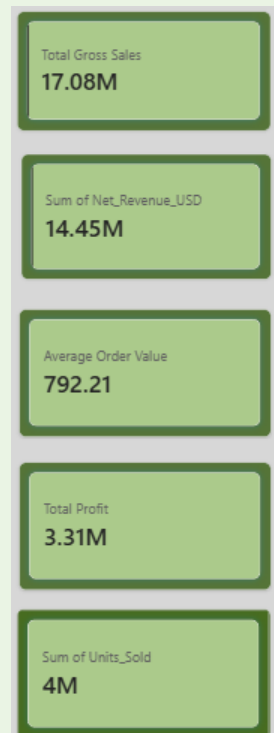

Chart	Visual	Question it answers
1.1	Cards	How big is the business?
1.2	Average Sales Per Year	How did the average sale change quarter by quarter?
1.3	Product wise Net Revenue and Profit	Which product categories earn the most?
1.4	Key Influencers	What makes a sale bigger or smaller?
1.5	Gross Sales in Each City	Which cities sell the most?

Chart 1.1 Headline Cards

Chart type: Card

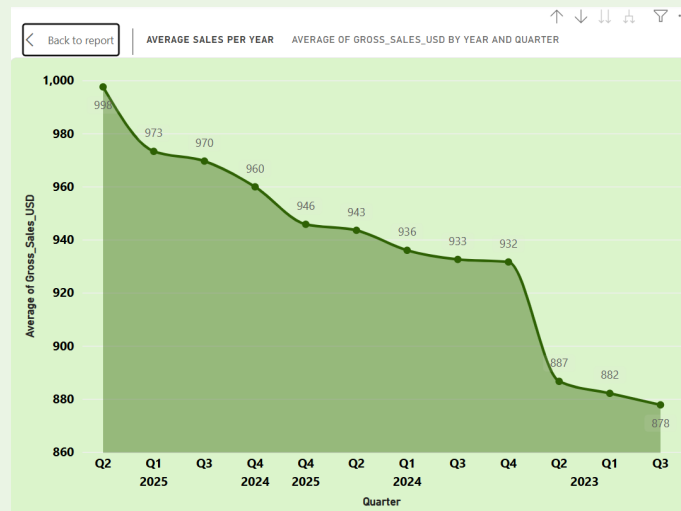

The business sold about 3.88 million units in three years and billed \$17.08M in gross sales. After discounts of \$2.63M, the net revenue is \$14.45M. After the cost of goods, logistics and marketing, the profit is \$3.31M, which is 22.9% of net revenue.

The average order brings in \$792.21 of net revenue. The units card shows 4M, which is 3.88M rounded.

Chart 1.2 Average Sales Per Year

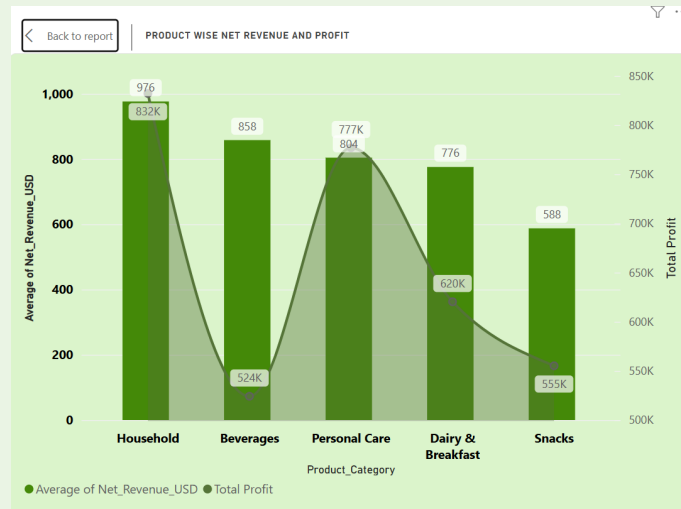

Chart type: Area chart. Fields: Year, Quarter, Average of Gross_Sales_USD

The average gross sale per order went up from \$882 in Q1 2023 to \$998 in Q2 2025, which is about 13% higher. The biggest jump came in Q4 2023, when the average went from \$878 in Q3 to \$932. In the last two quarters of 2025 the average came down to \$970 and \$946, so these two quarters should be watched. The chart is sorted from the highest value to the lowest, so the quarters are not in date order.

Chart 1.3 Product wise Net Revenue and Profit

Chart type: Column and line chart. Fields: Product_Category, Average of Net_Revenue_USD, Total Profit

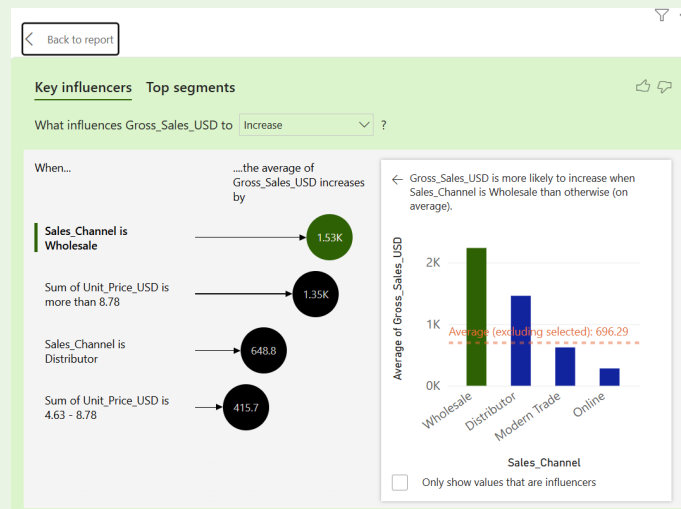

Household has the highest average net revenue per order (\$976) and also the highest total profit (\$832K). Personal Care is second in profit (\$777K) even though its average order is lower (\$804).

Beverages has the second highest average order (\$858) but the lowest total profit (\$524K), so high sales are not turning into profit. Snacks has the smallest average order (\$588) but still earns \$555K, which is more than Beverages. The columns show an average per order and the line shows a total, so they answer different questions.

Chart 1.4 Key Influencers of Gross Sales

Chart type: Key influencers. Target: Gross_Sales_USD. Explain by: Sales_Channel, Product_Category, Unit_Price_USD

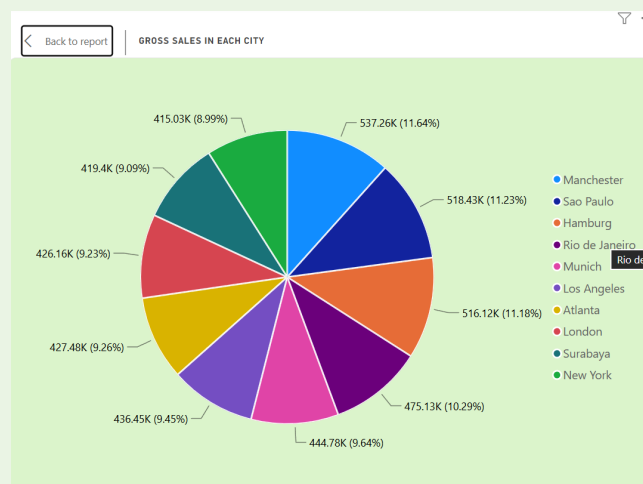

This chart shows what pushes the gross sales up. Orders from the Wholesale channel raise the average gross sale by about 1.53K, which is the biggest effect. A unit price above 8.78 raises it by 1.35K. Distributor orders add 648.8 and a unit price between 4.63 and 8.78 adds 415.7.

In the small chart on the right, Wholesale has the highest average gross sale (about 2.2K), followed by Distributor, Modern Trade and Online. The average of all other orders is 696.29. So the sales channel is the main reason for the size of a sale.

Chart 1.5 Gross Sales in Each City

Chart type: Pie chart. Fields: City, Sum of Gross_Sales_USD. Filter: Top 10 cities

Manchester is first with \$537K of gross sales, followed by Sao Paulo (\$518K) and Hamburg (\$516K). The ten cities are close to each other, from \$415K to \$537K, so no single city is far ahead. Four of them are in Europe (Manchester, Hamburg, Munich, London), three in the USA, two in Brazil and one in Indonesia.

Together these ten cities make 27.0% of the gross sales of all 48 cities, so the sales are well spread.

Dashboard 2: Channel, Brand and Product Performance

Objective 2: Find the strongest channels, brands and product categories.

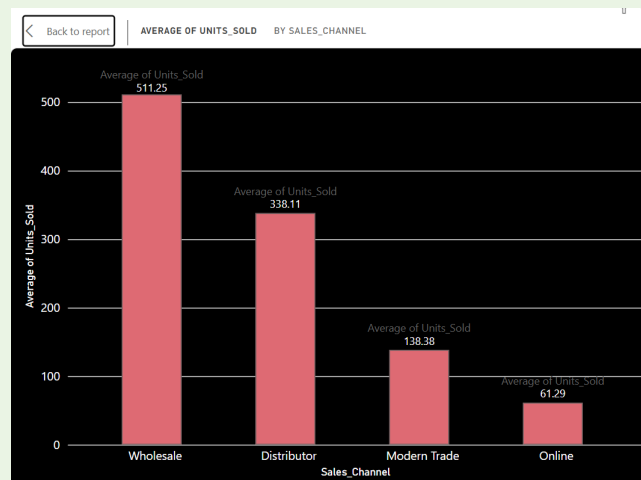

The second page compares how the business sells. The top row shows the average units per order by channel, the gross sales by channel and the top 10 brands. The bottom row shows the revenue share table, the profit margin by product category and the net revenue by region.

Chart	Visual	Question it answers
2.1	Average Units Sold by Channel	How big is a normal order in each channel?
2.2	Gross Sales by Channel	How are the gross sales split across channels?
2.3	Revenue Share % Table	What is the net revenue share of each channel?
2.4	Top 10 Brands	Which brands earn the most per order?
2.5	Profit Margin by Category	Which categories have the best margin?
2.6	Net Revenue by Region	Which regions earn the most?

Chart 2.1 Average Units Sold by Sales Channel

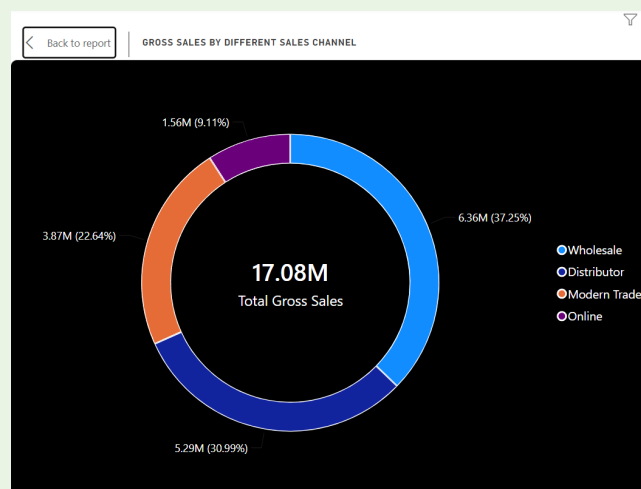

Chart type: Column chart. Fields: Sales_Channel, Average of Units_Sold

A normal Wholesale order has about 511 units. A Distributor order has 338, Modern Trade 138 and Online only 61. So a wholesale order is more than eight times bigger than an online order. These big orders are the reason why Wholesale and Distributor lead in volume.

Chart 2.2 Gross Sales by Different Sales Channel

Chart type: Donut chart. Fields: Sales_Channel, Sum of Gross_Sales_USD

The total gross sales are \$17.08M. Wholesale gives \$6.36M (37.25%), Distributor \$5.29M (30.99%), Modern Trade \$3.87M (22.64%) and Online \$1.56M (9.11%). Wholesale and Distributor together give about 68% of the gross sales.

Chart 2.3 Revenue Share % by Sales Channel

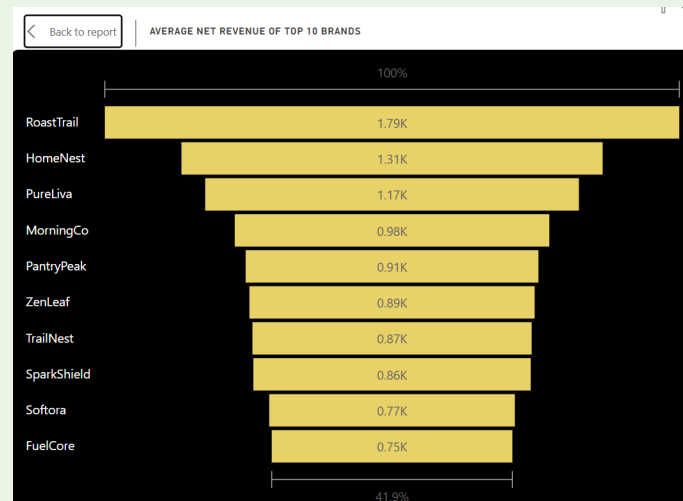

Chart type: Table. Rows: Sales_Channel. Values: Revenue Share %

Sales_Channel	Revenue Share %
Distributor	0.31
Modern Trade	0.23
Online	0.10
Wholesale	0.36
Total	1.00

The table shows the share of net revenue of each channel: Wholesale 0.36, Distributor 0.31, Modern Trade 0.23 and Online 0.10, with a total of 1.00. In percent these are 36.05%, 30.81%, 23.33% and 9.82%. Wholesale and Distributor together bring about two thirds (66.9%) of the net revenue.

Chart 2.4 Average Net Revenue of Top 10 Brands

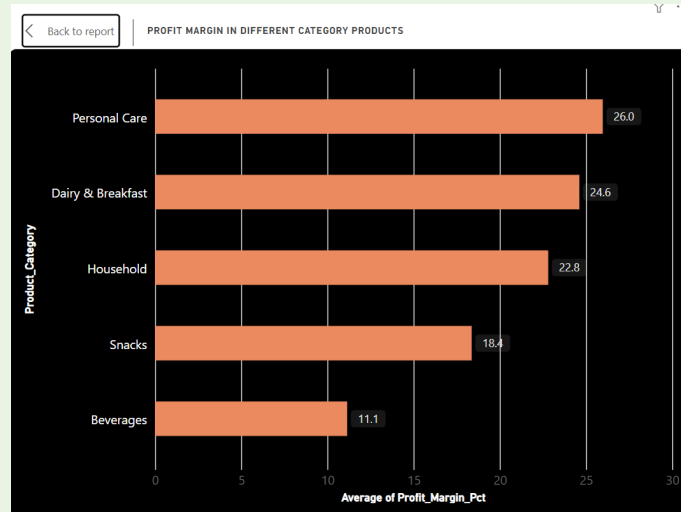

Chart type: Funnel chart. Fields: Brand, Average of Net_Revenue_USD. Filter: Top 10 brands

RoastTrail is far ahead with an average net revenue of about \$1.79K per order, which is nearly 2.4 times the tenth brand, FuelCore (\$0.75K). HomeNest (\$1.31K) and PureLiva (\$1.17K) are second and third. The brands from fourth to tenth are between \$0.75K and \$0.98K.

Chart 2.5 Profit Margin in Different Category Products

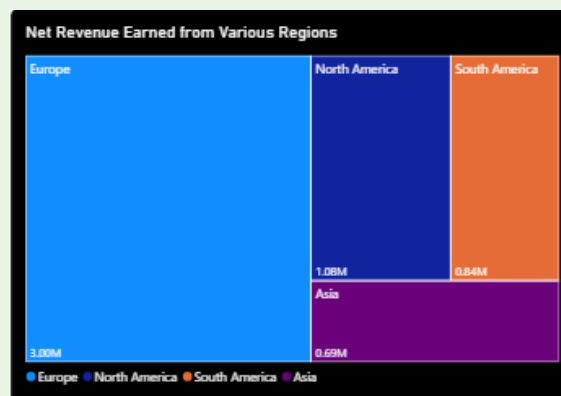

Chart type: Bar chart. Fields: Product_Category, Average of Profit_Margin_Pct

Personal Care has the best average margin at 26.0%, then Dairy & Breakfast (24.6%) and Household (22.8%). Snacks is at 18.4%. Beverages is the lowest at 11.1%, which is less than half of Personal Care, even though Beverages is the biggest category by net revenue (\$3.74M, 25.9% of the total). A small improvement in the price, cost or discount of Beverages would make a big difference to the total profit.

Chart 2.6 Net Revenue Earned from Various Regions

Chart type: Treemap. Fields: Region, Sum of Net_Revenue_USD. Filter: Top 15 cities

In this chart Europe earns the most net revenue, \$3.00M, which is more than the other three regions together (North America \$1.08M, South America \$0.84M, Asia \$0.69M). The chart only covers the top 15 cities by gross sales, so Oceania is not shown.

For all 48 cities, Europe is still first with 33.3% of net revenue (\$4.81M), followed by North America (\$3.34M), Asia (\$2.95M), South America (\$1.73M) and Oceania (\$1.63M).

Dashboard 3: Marketing, Logistics and Profit Drivers

Objective 3: Check cost efficiency and what drives profit.

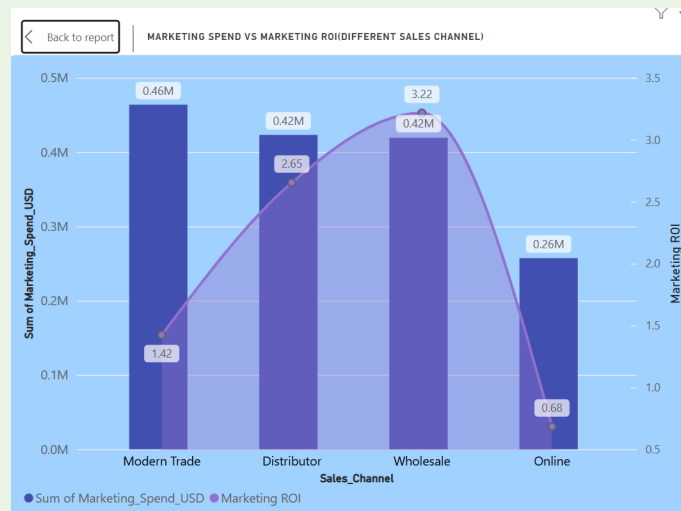

The third page looks at the cost side. The units sold by product are on the left. In the middle are the marketing spend with marketing ROI and the decomposition tree of profit. On the right are the logistics cost by city and the units sold by product category.

Chart	Visual	Question it answers
3.1	Marketing Spend vs Marketing ROI	Does the marketing money give a good return in each channel?
3.2	Logistics Cost % by City	Where is logistics cost the highest?
3.3	Decomposition Tree	What makes up the total profit?
3.4	Units Sold by Product	Which products sell the most units?
3.5	Units Sold by Product Category	Which categories sell the most units?

Chart 3.1 Marketing Spend vs Marketing ROI by Sales Channel

Chart type: Column and line chart. Fields: Sales_Channel, Sum of Marketing_Spend_USD, Marketing ROI

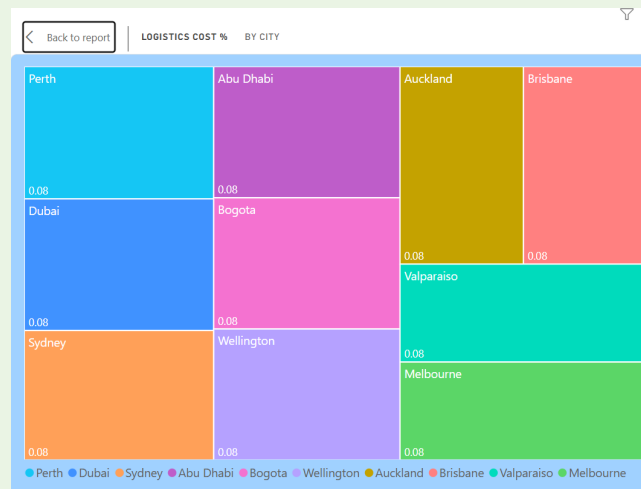

The marketing spend is almost the same for Modern Trade (\$0.46M), Distributor (\$0.42M) and Wholesale (\$0.42M), but the return is very different. Wholesale gives 3.22 of profit for every \$1 of marketing and Distributor 2.65. Modern Trade gives 1.42. Online spends \$0.26M and gives only 0.68, which is the lowest return of all channels.

Wholesale and Distributor get 53.9% of the marketing budget and make 74.7% of the profit. Online gets 16.5% of the budget and makes 5.3% of the profit.

Chart 3.2 Logistics Cost % by City

Chart type: Treemap. Fields: City, Logistics Cost %. Filter: Top 10 cities

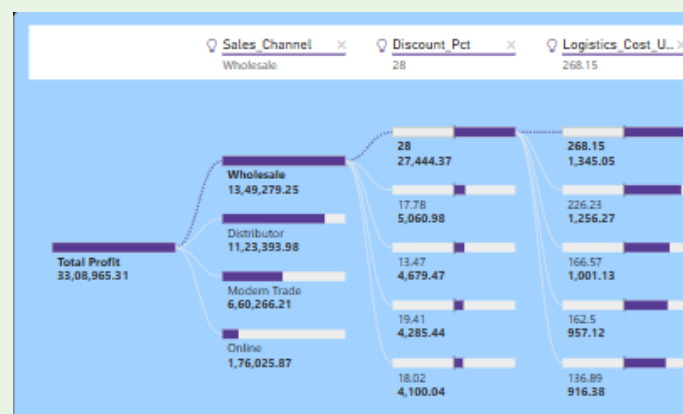

The chart shows 0.08 for every city, which means about 8% of net revenue. The exact values are Perth 8.21%, Dubai 8.17%, Sydney 8.04%, Abu Dhabi 8.01%, Bogota 8.01%, Wellington 8.00%, Auckland 7.99%, Brisbane 7.95%, Valparaiso 7.90% and Melbourne 7.90%.

Six of these ten cities are in Oceania, two are in the UAE and two are in South America. The average for the whole company is 6.8%, so these cities are higher, which may be because they are far from the supply centres. By channel, Online has the highest logistics cost (10.8% of net revenue), then Modern Trade (7.9%), Distributor (6.4%) and Wholesale (5.4%).

Chart 3.3 Decomposition Tree: What Drives Total Profit?

Chart type: Decomposition tree. Analyze: Total Profit. Explain by: Sales_Channel, Discount_Pct, Logistics_Cost_USD

The tree starts with the total profit of \$3.31M and splits it by sales channel. Wholesale is the biggest with about \$1.35M (40.8%), followed by Distributor (\$1.12M), Modern Trade (\$0.66M) and Online (\$0.18M).

On the selected path, the Wholesale orders with a 28% discount give a profit of about \$27.4K, and the orders with a logistics cost of 268.15 give a profit of \$1,345. This shows that big wholesale orders can have deep discounts and still give a strong profit.

Chart 3.4 Units Sold by Product

Chart type: Table. Rows: Product_Name. Values: Sum of Units_Sold

Product Name	Sum of Units Sold
Body Wash Citrus	113411
Cereal Corn Flakes	96419
Chocolate Cookies	158395
Conditioner Smooth	105615
Dishwash Liquid	117032
Energy Drink Classic	180188
Energy Drink Zero	198116
Glass Cleaner	103051
Granola Honey	107922
Greek Yogurt Plain	110848
Green Tea Bags	138110
Hand Soap Gentle	121193
Instant Coffee Gold	159112
Laundry Detergent	113682
Oats Wholegrain	108745
Paper Towels	112931
Peanut Butter Creamy	98897
Potato Chips BBQ	147616
Potato Chips Sea Salt	137775
Protein Bar Cocoa	159195
Protein Bar Peanut	156471
Shampoo Repair	122128
Sparkling Water Berry	153643
Sparkling Water Lemon	152099
Surface Cleaner	124062
Tissue Pack	112250
Toothbrush Soft	114205
Toothpaste Mint	109896
Trail Mix Original	152606
Yogurt Cup Strawberry	97861
Total	3883474

The 30 products sold 3,883,474 units. The two energy drinks sell the most: Energy Drink Zero (198,116) and Energy Drink Classic (180,188), together 9.7% of all units. Protein Bar Cocoa (159,195), Instant Coffee Gold (159,112) and Chocolate Cookies (158,395) complete the top five. The top five together make 22.0% of the units.

Cereal Corn Flakes (96,419), Yogurt Cup Strawberry (97,861) and Peanut Butter Creamy (98,897) sell the least. The best seller is only about twice the weakest, so the volumes are fairly even.

Chart 3.5 Units Sold by Product Category

Chart type: Bar chart. Fields: Product_Category, Sum of Units_Sold

Beverages sold the most units (0.98M), then Snacks (0.91M), Personal Care (0.69M), Household (0.68M) and Dairy & Breakfast (0.62M). Beverages and Snacks together make almost half of all units. Beverages sells the most units but has the lowest profit margin, so selling more does not always mean earning more.

Conclusion

In three years the business sold 3.88 million units. Gross sales of \$17.08M became \$14.45M of net revenue and \$3.31M of profit.

Sales performance: *The average sale per order went up from \$882 to \$998 between Q1 2023 and Q2 2025. The sales channel matters most for the size of an order, and the sales are spread over many cities.*

Channels, brands and categories: *Wholesale and Distributor bring about two thirds of the net revenue. Personal Care has the best margin and Beverages the lowest, even though Beverages sells the most units. RoastTrail is the top brand and Europe is the top region.*

Costs and profit: *Marketing gives the best return in Wholesale (3.22) and Distributor (2.65) and the lowest in Online (0.68). Logistics cost is highest in Oceania, Dubai, Abu Dhabi and the Online channel.*
